LLM Basics

LLMs are a type of large deep learning model that is trained on a vast amount of data from various sources, including Wikipedia, web scraping, etc. These LLMs use the concept of reinforcement learning, where they try to capture the patterns based on the user behavior on the system.

And I have developed a web user interface using the Python web framework Streamlit for pre-trained Ollama LLMs chatbot for user interaction

Screenshot of Web Interface:

This LLM is deployed over the streamlit community cloud which could be accessed with https url
